

Revolution in Suspended Claims

ProClaim is a claims distribution system designed for the unique requirements of suspended healthcare claims. ProClaim revolutionizes the out-dated paper claims distribution process with the latest Web-based technology to efficiently prioritize, organize, and assign claims to qualified examiners. It is built out of real-world experience in a claims processing unit. The streamlined process created by ProClaim is estimated to provide over 15% savings in total cost in claim processing.

Features:

- Automates all organization, prioritization, and assignment of claims
- Works with all processing systems including PowerMHS, Facets, Amisys, and others
- Fraction of the cost of competitor workflow modules with much greater feature set
- Presents "mathematically optimized" claim to examiner based on skill-set and timeliness
- Seamless ability to collaborate between departments
- Define diverse check run dates requirements to meet performance guarantees
- Real-time monitoring of inventory changes and examiner productivity throughout day
- SQL-based routing enables all possible routing criteria, eliminating programmers
- Eliminates examiner "cherry picking" of claims
- Hierarchical management reporting eliminates manager "number fudging"
- Web-based system makes geography irrelevant in distributing claims
- Claims can route to infinite locations in one day. Gain speed over batch processes
- Automatically provides Image, Claim in host system, and qualified Processing Alerts
